

Lab 10

Task

- Find the location of the substring “t” starting from “pos” in “s”.
 - You can implement the function below
 - `int Index(char * s, char * t, int pos)`
 - Refer to the pseudocode in the next slide

```
int Index(SString S, SString T, int pos) {  
    // 返回子串 T 在主串 S 中第 pos 个字符之后的位置。若不存在,则函数值为 0。  
    // 其中,T 非空, $1 \leq \text{pos} \leq \text{StrLength}(S)$ 。  
    i = pos;    j = 1;  
    while (i <= S[0] && j <= T[0]) {  
        if (S[i] == T[j]) { ++i;    ++j; } // 继续比较后继字符  
        else { i = i - j + 2;    j = 1; } // 指针后退重新开始匹配  
    }  
    if (j > T[0]) return i - T[0];  
    else return 0;  
} // Index
```

Lab 10 Submission

Due at 23:59, June 4.

Note: Submission after 23:59, June 4 will NOT be graded.

Zip file name: StudentID_LastName_FirstName_Lab#
(Please use Zip to compress your submission)

Replace # with the lab number.

Assume my ID is 12345678, the zip file name for Lab 10 is:

12345678_Liang_Pengpeng_Lab10

Note: If you do not follow the rule of the name of the Zip file, I might not be able to find your submission.
